James M. Dean Joins NetStar-1 as Chief Financial Officer

Rockville, Md. - March 29, 2007 - NetStar-1, Inc., an information technology solutions provider to government and commercial clients, today announced that James M. Dean has joined the company as its Chief Financial Officer. Dean will lead NetStar-1's finance organization and will have responsibility for accounting, strategic planning, treasury, tax and audit. He will also lead the corporate development and facilities teams.

Dean has over 25 years of financial and management experience in the information technology sector. Prior to joining NetStar-1, Dean was CFO at Northrop Grumman Computing Systems, Inc. (NGCS), Laurel, Md., where he led the company's financial, contractual, operational and proposal activities and was a member of NGCS' Executive Committee.

Previously, Dean was Vice President and CFO for Federal Data Corporation, Bethesda, Md., where he provided a leadership role in all financial, merger and acquisition, banking, shareholder and public bond market activities and served on the company's Corporate Management, Operations Review, Strategic Planning and Pricing Committees. Dean was previously employed at Price Waterhouse for 14 years before joining Federal Data Corporation.

"Jim's extensive financial management and leadership experience with information technology services companies is a great match with NetStar-1's business operations and strategic goals," said Bill Strang, NetStar-1's president and CEO. "His knowledge of the IT services business, particularly in the government market, will be invaluable to us as we continue to grow the scope and reach of our service offerings through internal growth and acquisitions."

About NetStar-1

NetStar-1, Inc. is a leading professional services company specializing in providing IT solutions to government and commercial clients. Founded in 2002, NetStar-1 has grown to almost \$100 million in annual revenue and nearly 500 employees. Headquartered in Rockville, Md., NetStar-1 supports its clients nationwide through a network of five offices and numerous on-site client locations. The company provides consulting, design and implementation services in four key areas: network infrastructure, applications development, security, and server/storage technologies.
